

Mazak Assigns West Michigan Territory to Addy Machinery Company

(FLORENCE, KENTUCKY) – Mazak Corporation (Florence, Kentucky) has announced that Addy Machinery Company (Clinton Township, Michigan), its distributor in the eastern half of Michigan since 1978, will now be adding the western half of the state, effective immediately. Addy Machinery also will cover Chippewa, Mackinac, and Luce counties in the eastern portion of Michigan's Upper Peninsula. The remainder of the Upper Peninsula will be served by Machinery Systems North, based in Brookfield, Wisconsin.

According to Addy Machinery President James C. Addy, the company is establishing a new sales office in the greater Grand Rapids area that will be headed by Peter Addy, vice president. Personnel at the new office will include three sales engineers, six service engineers, and an applications engineer. All Western Michigan Mazak customers or those interested in more information can call 1-800 ADDY NOW (1-800-233-9669) with any questions.

Furthermore, the new West Michigan office will report to Mazak's Midwest Regional Headquarters in Schaumburg, Illinois, headed by Bill Bettis, general manager, and Jim Jackson, service manager. The telephone number is (847) 885-8311 for more information.

Addy Machinery Company will continue to operate its 20,000-square-foot Technical Center in Clinton Township completed in 2000. Staff includes five sales engineers, seven additional service engineers and three additional applications engineers. While growing their operation, Addy Machinery also successfully became ISO-9002 and QS-9000 registered, "which tells all our customers that Addy, like Mazak, works to the highest international quality standards. We're qualified to conduct full turnkey projects, time studies, test cuts, and training services, whatever customers require to improve their business," Addy says. More about the company is available at www.addymachinery.com.

The largest machine tool builder in the world, Mazak is unsurpassed in continually providing machine-tool and production technologies that improve manufacturing processes for companies of all sizes.
